OBJECTIVE

Motivated and detail-oriented software engineer with a strong foundation in computer science and hands-on experience in full-stack development, particularly with Python Django and React. Eager to apply problem-solving skills, knowledge of coding languages, and enthusiasm for learning in a collaborative environment. Seeking an entry-level software engineer position to leverage my ability to contribute to innovative projects and grow professionally within a dynamic tech team.

EDUCATION

California State University, Eastbay

Bachelor of Science in Computer Science

Hayward, CA

Dec. 2022

EXPERIENCE

Peet's Coffee & Tea

Warehouse Manager

June 2023 – Present

- Successfully revamped warehouse operations and trained staff, resulting in a 98% reduction in order fulfillment errors.
- Developed a custom web application that enhanced order tracking capabilities, providing transfer verification and out-of-stock notifications, thereby improving transparency and end user satisfaction.
- Facilitated the rollout of D365, ensuring seamless integration into existing operations and training staff for optimal use, resulting in enhanced operational efficiency.

Digital Factory

Full Stack Engineer Intern

March 2023 – November 2023

- Designed and implemented user authentication features, including account creation, login, and logout functionalities, for an iOS application using the Firebase library, enhancing user experience and security.
- Constructed an applicant tracking tool using Google Sheets and Google Scripts, tailored specifically for the HR team to streamline the recruitment processes and improve candidate management efficiency.

PROJECTS

ShipTeo

Python / Django

January 2024 – July 2024

- Designed, implemented, and managed ShipTeo, a warehouse management extension, streamlining inventory tracking and order fulfillment processes.
- Leveraged ShipTeo to enhance order picking efficiency, resulting in a 20% reduction in order processing time and improved accuracy in inventory management.
- Utilized ShipTeo to analyze inventory levels and accurately calculate weeks of supply, ensuring optimal stock management and more accurate replenishment.

SKILLS

Technical skills:

- C++, Python, JavaScript, Swift, Version Control, Cloud Services, API Development, Excel, and SQLite.

Soft skills:

- Problem-Solving, Collaboration, Communication, Adaptability, and Time Management.
